

taridium

unified voicemail solution

Taridium's unified voicemail solution allows you to use a single mailbox for your SIP phone as well as any mobile phone(s) and PSTN line(s) that support conditional call diversion.

key advantages

- no more missed messages
- SMS notification to several phones*
- Voicemail to e-mail
- Direct Inward System Access
- Secure Voicemail
- Transparent Use

With taridium's unified voicemail solutions your employees will never miss a voice message again, regardless of whether somebody called the users cellphone or deskphone.

An unlimited number of devices, such as SIP phones, GSM cellphones, WiFi SIP phones etc. can use the same mailbox.

Users get notified of new voicemails by SMS* or e-mail and have the option of having their voice messages attached as wave files.

Users can optionally access a local dialtone when accessing their messages. This allows them to place calls as if they were at their desk phones.

Taridium's unified voicemail solution is secure because messages are stored on your local network.

Users access their voicemail from their cellphones in the same way as if they were using their carrier's mailbox.

* SMS notification requires an account with a SMS provider
